Update

An estimated **47 million** [1] children under the age of 5 years were severely or moderately wasted even before the COVID19 pandemic. Most of these children resided in predominantly sub-Saharan Africa and South Asia.

While eliminating all forms of malnutrition by 2025 is one of the goals of the United Nations Decade of Action on Nutrition 2016–2025, none of the countries is on course to meet all the ten global **nutrition targets** [2] for 2025. Only 8 out of 194 countries are on track to meet four targets. The pandemic that has hit the population in early 2020 has likely exacerbated the situation, especially in low and middle-income countries. Considering the impact of COVID19, these estimates need to be **revised** [3] upwards.

COVID19 and malnutrition are **biologically related** [3]. Malnutrition makes an individual more susceptible to infection and vice versa. The policies employed to control the spread of the virus caused and continue to cause **disruptions** [4] to health systems, food systems, economic systems, and social safety nets. We live in a complex and interconnected world, disruption in one sector ripples to others. For instance, movement restrictions disrupt transport systems, and transport disruptions impact access to food. The constant lock and unlock to address the spikes result in loss of businesses, leading to rising unemployment and underemployment, impacting people's purchasing power, affecting nutrition outcomes. According to the International Food Policy Research Institute, an additional 140 million people are estimated to fall into extreme poverty, out of which 42 million are from South Asia, with a 20% rise in poverty levels. Poverty is directly linked to **food insecurity** [4] jeopardizing nutrition. Thus, all forms of malnutrition are likely to have been exacerbated by the pandemic.

The corona-control measures led to the disruption of the government schemes and service delivery mechanisms. On this site, the **resources** page includes a chronological map of nutrition-related policy response by state and nationally, while the **policy matrix** gives a birds-eye view of state-level developments. The vulnerable population, especially pregnant women and young children, was severely impacted by service disruptions. According to NFHS-4 (2015-2016), pre-COVID19 coverage of key nutrition interventions was about 65%, with significant inter-state variability, which likely to has been worsened. UNICEF has termed children as **"hidden victims"** [5] of the pandemic, citing reduced coverage of life-saving free meals, vaccinations, and other services.

Healthy child development is path-dependent, especially the first 1000 days, on timely and essential inputs. Early action is vital to prevent irreversible damage and to break the intergenerational cycle of malnutrition. The opportunity costs of nutrition interventions are lower, benefit to cost ratio of nutrition-related programs is 16:1. The earliest **time to act** [3] is now. It was the case before the pandemic and still is.

To mitigate the effects of the pandemic on malnutrition, India needs to ensure the implementation of essential **nutrition interventions** [3] considering the **safety** [4] of frontline workers. The focus should be on increased coverage, continuity, equity, intensity, and quality. Various states stepped up to the challenge with household-level distributions of take-home ration and IFA tablets by Anganwadi and frontline workers during the pandemic. The monitoring page of this site showcases the trend and current status of continuity of nutrition-related services for each Indian state and can be found in this page **below**. Many states have resumed maternal health and childcare services while others are following suit.

Additionally, measures must be taken to address the social determinants. Additional cash transfer programs can ensure basic food and income security. Information technology and social media tools can be effectively employed for social behavior change campaigns to address gender issues- girl education, marriage age, and domestic violence. The situation demands increased **financial support** [4] towards nutrition efforts continued post-pandemic. Similarly, other related systems need to be **revitalized** [3].

In order to understand the state of child malnutrition, more and accurate information is required. Social distancing measures have impacted data collection and monitoring efforts. National and international agencies have flagged data gaps and reduced monitoring coverage during the pandemic. **Data availability** [3] supports the **evidence base** [4] and enables informed decision-making aiding prediction and planning. In 2020, globally, **149.2 million** [7] children under the age of 5 were stunted, 45.4 million wasted, and 38.9 million overweight. In reality, the figures for child wasting could be about 15 percent or **1.15 times higher** [6] than reported in the Joint Malnutrition report 2021. Post-COVID data is likely to underreport wasting as muscle and fat loss is reversible in a short time. Repeated episodes of wasting affect the linear growth of the child and cause stunting. The **data gap** [7] prevents the prediction of the increased stunting prevalence as a long-term effect of the pandemic. Remote monitoring, touchless monitoring technologies, and other alternatives can be explored to improve the monitoring of malnutrition. It is equally important to record and respond to the **grassroots-level experiences** [4] and challenges of the frontline workers and the needs of the beneficiaries.

India will require strong leadership and continued commitment, adaptation of the national nutrition mission, strengthening of the social safety net, and innovative evidence-based data to make informed decisions, implement them and ensure feedback to take necessary **corrective action** [4] to address the chronic malnutrition crisis aggravated by the COVID19 pandemic.

State Updates : Assam

Date	
May-21	In May directives have been issued by NHM Assam reinforcing continuity of services including flagship programmes like HBYC, IFA supplementation by ASHAs, NRCs. Directorate of Social Welfare also issued directive reinforcing continuity of services (growth monitoring, screening for SAM, CMAM services, IFA for out-of-school, counselling on MIYCN).
May-21	Growth monitoring coverage stands at above 60% according the ICDS Data. Most NRCs are functioning although bed occupancy rates and field referrals have reduced. Reporting on CMAM is sporadic.
May-21	On 29th May 2021, UNICEF supported capacity building on continuity of services in context of COVID19 for all district and project officials under Dept of Social Welfare
May-21	From June 2021, intensive remote supervision has been initiated by Dept. of Social Welfare with support from UNICEF and academic partners (Tezpur University and Assam Medical College). As part of this exercise, 50 'Nutrition Mentors' are telephonically reaching out to all CDPOs and Supervisors across the state and sensitizing them on continuity of essential services. Three such rounds are planned. Thematic focus during first round of calls in June is on Screening for malnutrition and CMAM implementation and reporting.

State Updates : Maharashtra

Date	
Jun-21	Detailed guidelines on CBE for CF and feeding issued using digital platforms.
Jun-21	E-IYCF training with updated protocols completed reaching out to all the 265 L3 delivery points and also all the 60,000 ASHAs .Special session by Chief Minister with 60,000ASHAS and 110000 awws on Nutrition and its role in paediatric group.
Jun-21	43/43 NRCs functional with bed oaacupancy improving and detailed review by the Public Health authorities for action.State endorsed care of children with SAM beyond NRC in the paediatirc ward of the district hospitals and Medical colleged in context of the third wave affecting the paediatric age group.
May-21	GMP is currently encouraged by the department in all areas with low transmission of COVID 19 across all 36/36 districts following all CABs of screening 5 children per day. Updated guidelines were issued on 18th May for screening and management of children with SAM in context of COVID 19 for rural and tribal areas as well as Urban areas however centres in blocks and districts with high transmission districts and blocks has low level of screening as parents refuse to bring the children for screening. Department has issued guidance on home based screening. 60% AWCs in the state are implementing GMP as per ICDS reports. AWCs in Urban corporations remain challenge. Screening drives have been initiated in tribal areas as premonsoon activity.
May-21	MAA services and IYCF counselling continues in the state through SRCs and platforms of VHNSDs and Home visits by ASHA under HBNC and HBYC and by AWWs. The visits are clubbed with COVID surveillance visits in high transmission zones. More than 95% newborns are initiated on BF within 1 hour of delivery as per HMIS reports. Refresher training has been conducted for 35,000/66000 ASHAs and 1200 L2, L3 delivery point staff in May 2021 using the 13 IYCF training videos developed for digital training jointly with SFWB, SRCs and conultants. However, the hesitancy continues for BF in COVID positive mothers and counselling to support such mothers continue in the state.
May-21	40/43 NRCs are functional though with very low admissions due to COVID-19 pandemic surge in the state. Refresher training was conducted in March 2021 reaching out to 141 MOs and staff from 43 NRCs and pediatric wards. Screening for children admitted to pediatric wards has been initiated in 34 DH/SDH. 354/1204 (29%) children admitted to pediatric ward were identified with SAM in March and April. May data is awaited. CMAM continues as home based VCDC in 34/34 rural and tribal districts of Maharashtra using state protocols. 22,063/42,334 (52%) children identified with SAM have been admitted to Home based VCDC till date as per ICDS protocols.
May-21	IFA supplies prepositioned continue to be provided to all PW and lactating mothers through VHNSDs and ANC clinics. More than 95% pregnant women have been supplemented with IFA as per HMIS. Review meetings with District officials have led to improved implementation of AMB in Adolescents and pediatric age groups. The coverage is improving slowly. 34% children in age group of 6mo to 59mo are reached with IFA syrup, 26% children and adolescents are reached with WIFS as per April reports.
May-21	As per the guidelines issued by ICDS Commissionerate on 15th April 2021, 25th April 2021 and 30th April 2021, AWCs continue to provide services for THR, Growth monitoring counselling and CBE events dedicated to improving CF and feeding and SAM using online platforms in high transmission areas. POSHAN card has been developed for providing services to children of migrant families and has been disseminated across the state for use. Dedicated digital platform for age appropriate messaging on nutrition is reaching out to more than 1 million ICDS programme participants.

State Updates : Odisha

Date	
May-21	As per the govt advisory (issued on 17 Apr 2021 / DWCD) THR and ration in lieu of hot cook meals provided at doorstep of beneficiaries covered under Supplementary Feeding Program on fixed day 1st of every month. GMP is also conducted across the state in all 30 districts.
May-21	As per the govt advisory (issued on 14 May 2021 / DWCD), IYCF practices are promoted with appropriate precaution.
May-21	Govt. advisories were issued from DWCD (dt. 14 May 2021) as well as from DH&FW (dt. 7 May 2021) related SAM management and preparedness of NRC during this pandemic. Children identified with SAM/MAM/SUW should be given special focus and adopted by CDPO/Supervisor/AWW as per the guideline and health and nutrition status to be strictly monitored and followed up. All NRCs in the state make ready themselves as per the Covid protocol issued by the dept.
May-21	As per the govt advisories issued from DS&ME, DH&FW and DWCD on 7 Apr 2021, 29 Apr 2021 and 14 May 2021 respectively tablets are distributed at the doorstep of the school going adolescent girls and boys, and out-of-school-adolescent girls by teachers and AWW respectively. Pregnant women and lactating mothers receive IFA tablets in VHSND sessions.

Threats	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC
Dengue							🟥	🟥				
Diarrhea							🟥	🟥				

State Updates : Uttar Pradesh

Date	
May-21	Centre based Growth Monitoring was compromised due to closure of AWCs. AWWs engaged primary into THR distribution and COVID related activities (ICDS letters). No Vazan divas organised. Growth monitoring prioritised for the undernourished children through home visit by AWWs (Ref: ICDS letter dated 18 May 21). Telephonic survey of FLWs in seven districts (aspirational districts) shows 47% AWWs did growth monitoring in May-21; however, could be inflated compared to field observations.
May-21	Knowledge and awareness on COVID-appropriate breastfeeding practices found to be low - About 57% FLWs were not aware that COVID positive mother can breastfeed her child (telephonic survey of FLWs in seven aspirational districts) . Anecdotal findings suggest delayed initiation of breastfeeding due to separation of mother & newborn. Delivery caseload has shifted from government hospitals to private clinics/nursing home which poses greater threat to breastfeeding practices and use of BMS. Sensitization of AWWs/ANMs on COVID-appropriate breastfeeding practices through daily messaging, telephonic calls and online training - reached around 11000 Health and ICDS Frontline workers.
May-21	With state wide lockdown and suspension of activities, both facility and community based SAM services affected adversely. May round of CMAM did not happen. 33 of 77 NRCs became non-operational around 12 May. As COVID cases reduced, NRC begin to reopen. By end May, 48 NRCs were operational. Admissions and bed occupancy rate declined and majority of NRCs had no admissions during the month. Many NRC staff affected due to COVID and MO/SN deputed for COVID related activities. Progress assessed every fifteen days and report shared with government. Guidelines issued by ICDS for follow up of SAM (other malnourished children) by AWWs through home visits. (Ref: ICDS letter dated 18 May 21).
May-21	AMB program implementation affected during the month. With COVID case upsurge, VHSND services affected due to FLW engagement in COVID related activities and lower demand for services, AWC and school closure continue to affect WIFS component. Telephonic survey with 83 ANMs in seven ADs shows decline in service update in VHNSDs; 80% ANM reported reduced footfall in May. About 93% ANM reported to have distributed IFA/Calcium during VHSND. THR distribution continued.

Continuity of services : Uttar Pradesh

State Policy Analysis

Drawing from Government circulars and guidelines, work by IFPRI/POSHAN presented in the policy matrices below gives an overview of the rapid evolution of policy actions over the past three months since the recognition of the COVID-19 pandemic and the subsequent lock-down from 25th March to 31st May 2020. State level government circulars or decrees were collected into an online database. These decrees were analyzed by their contents to determine the status of the delivery of interventions across the life cycle and included in the POSHAN Abhiyaan interventions. The results extracted were coded as intervention is fully operational, Intervention partly functional for selected beneficiaries or areas, Intervention is not operational and No information.

The matrix shows that in terms of the policy environment, the take home rations (THR) and immunization services in most all state were decreed to continue during the lockdown period. Announcements through the government circulars for the halt of growth monitoring and promotion services were found in most states. Mixed results for maternity cash benefits (PMMVY) and Mother's Absolute Affection (MAA) guidance on counselling for infant and young child feeding were found in the available government circulars.

The data presented are not comprehensive. Efforts will be made to fill the data gaps existing in states and UTs and to update on a regular basis.

Key	Indication
Yes	Intervention fully operational for all beneficiaries through mobilization or outreach
Partly	Intervention provided at health facilities without mobilization or outreach; or partly functional for selected beneficiaries or areas
No	Intervention not operational
NI	No information

The POSHAN COVID-19 Monitoring report for India is prepared by various development partners working in the area of food and nutrition security and compiled by UNICEF, IIT-B, IFPRI, World Food Programme and the World Bank.

This document consolidates relevant data to monitor the interactions between COVID-19 and nutrition across the most populous states affected by both the pandemic and overall malnutrition. The purpose is to present available data to policy makers and programme managers to strengthen the public health nutrition during the COVID-19 crisis.

The POSHAN COVID-19 Monitoring Report sources information from surveys, rapid assessments, academic journals, media, health management and child development information systems, state and district level reports and is updated monthly. The report also presents the work by numerous development partners in the sectors of nutrition and food security.

In addition to this report, we have also developed, **POSHAN COVID-19 Resources** - an online repository of key guidelines/documents on National and International Recommendations, Operational Guidelines and Program Guidance on COVID-19. We hope these two documents serve as useful resources in the POSHAN COVID-19 response.

We realize that when data are collected from many different sources and information that incorrect or incomplete data can appear. We kindly invite to present any issues detected to **PoshanCOVIDiitb@gmail.com**. By working together, we can compile robust information on Poshan & COVID-19 to assure the most appropriate response for India.
