

POSHAN COVID-19 MONITORING

Tracking information from surveys,
rapid assessments and information
systems to reinforce the nutrition
response during the COVID-19 crisis

For any feedback or additional information please contact: poshancovidiitb@gmail.com

Supported By

Methods

The POSHAN COVID-19 Monitoring report for India is prepared by various development partners working in the area of food and nutrition security and compiled by UNICEF, IIT-B, IFPRI, World Food Programme and the World Bank.

This document consolidates relevant data to monitor the interactions between COVID-19 and nutrition across the most populous states affected by both the pandemic and overall malnutrition. The purpose is to present available data to policy makers and programme managers to strengthen the public health nutrition during the COVID-19 crisis.

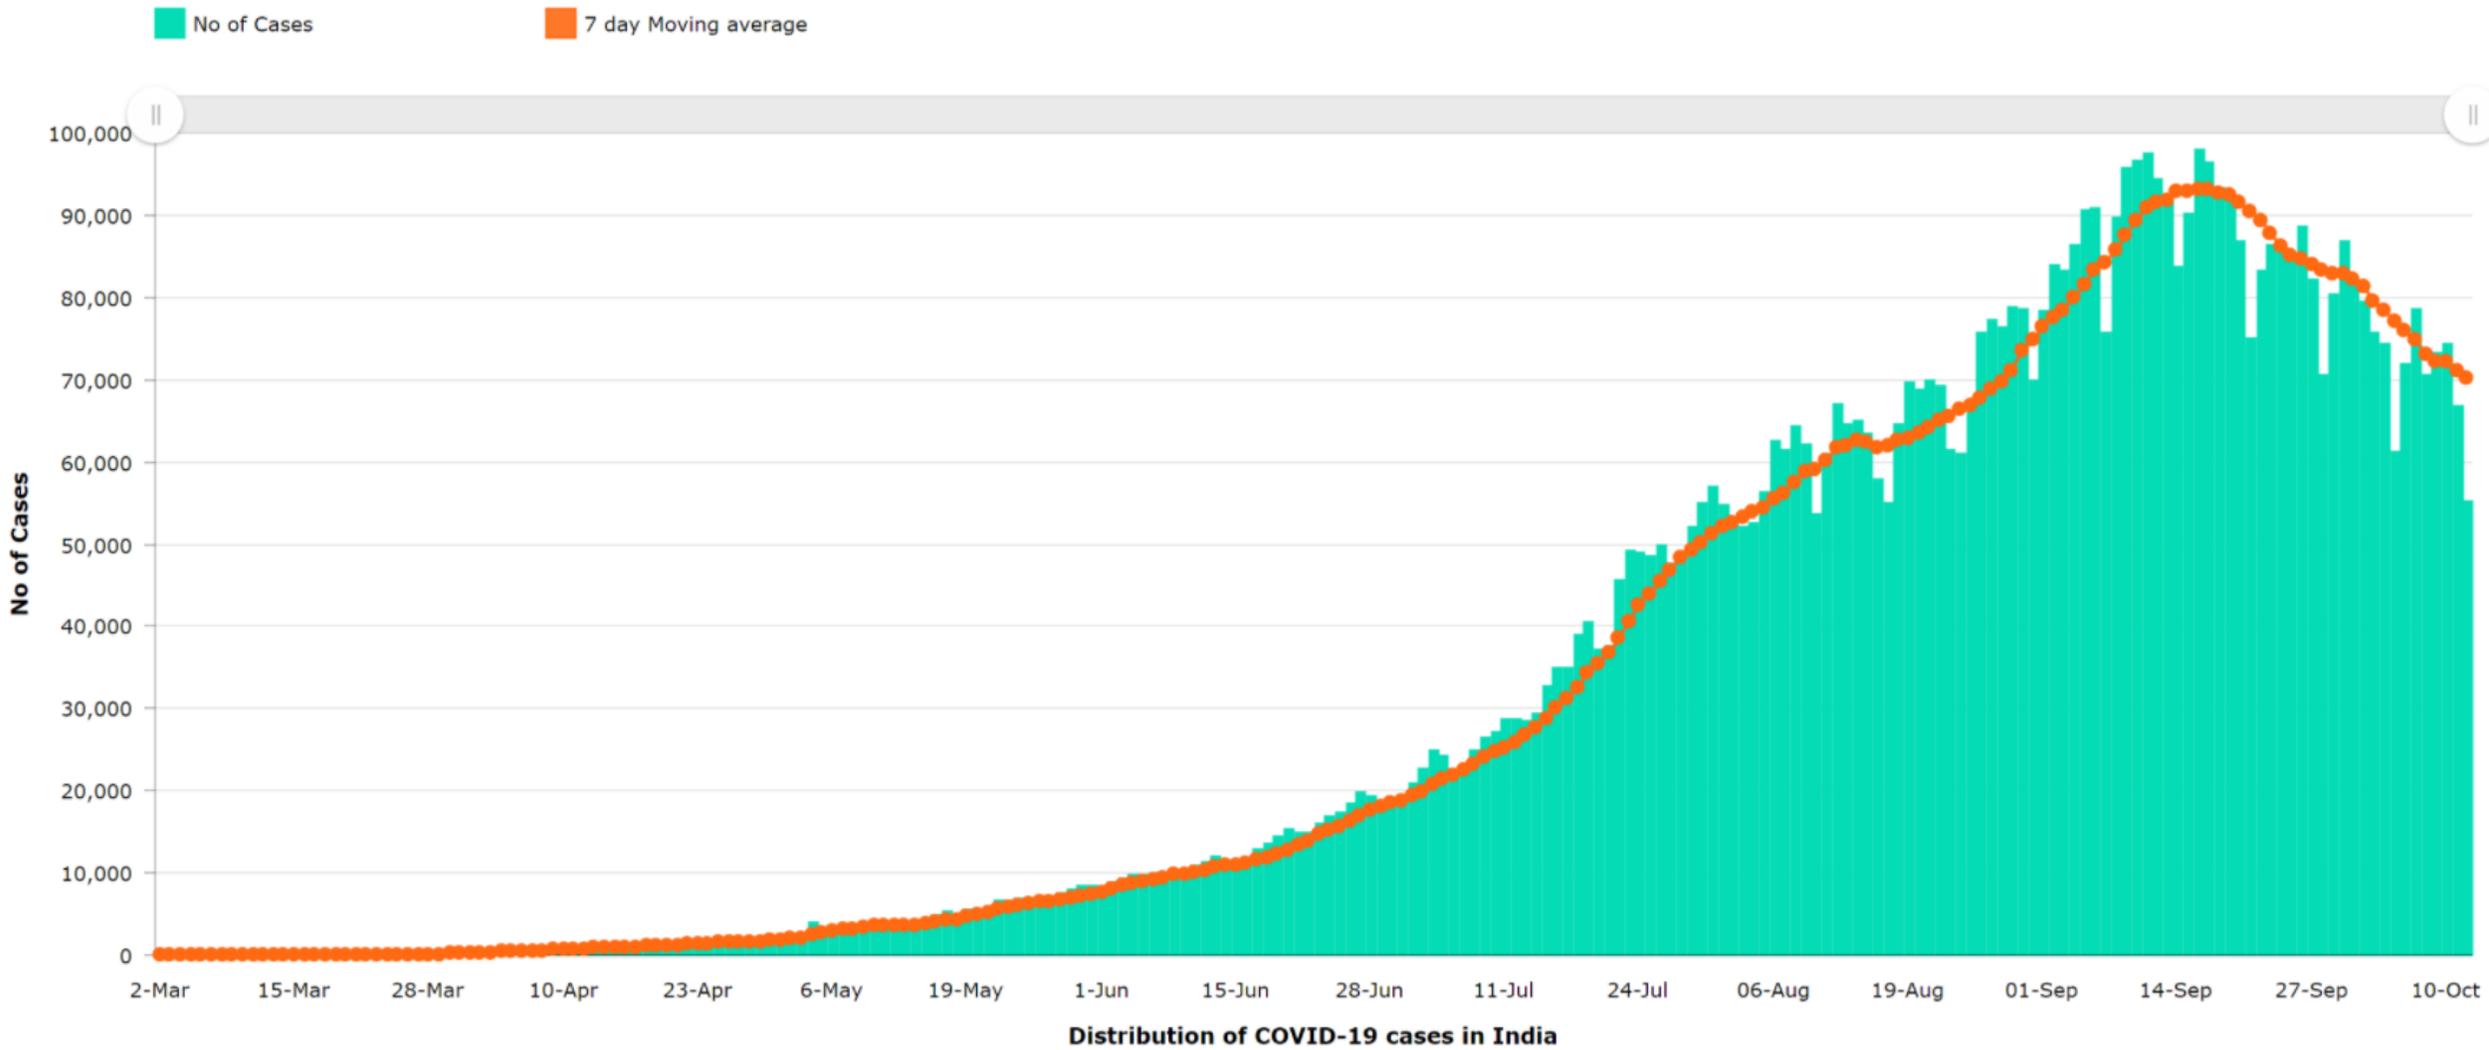

The POSHAN COVID-19 Monitoring Report sources information from surveys, rapid assessments, academic journals, media, health management and child development information systems, state and district level reports and is updated monthly. The report also presents the work by numerous development partners in the sectors of nutrition and food security.

In addition to this report, we have also developed, [POSHAN COVID-19 Resources](#) - an online repository of key guidelines/documents on National and International Recommendations, Operational Guidelines and Program Guidance on COVID-19. We hope these two documents serve as useful resources in the POSHAN COVID-19 response.

We realize that when data are collected from many different sources and information that incorrect or incomplete data can appear. We kindly invite to present any issues detected to PoshanCOVIDiitb@gmail.com. By working together, we can compile robust information on Poshan & COVID-19 to assure the most appropriate response for India.

Introduction

The outbreak of COVID-19 and the continuous rise in cases since January has presented India with significant challenges. The Government of India lockdown until June led to a significant reduction in public health and social safety net services affecting the health and nutrition of women and children especially in the most vulnerable groups. As the unlock started, public life began to recover but social distancing in many urban areas was practically impossible outside a lockdown. The use of masks to protect one another is common but nowhere near universal. Hand washing hygiene has likely increased exponentially but the majority of population still do not have easy access to soap and water for frequent handwashing during the day ([Kamath et al 2020](#)). The consequences of greater public exposure were severe and cases rose quickly. In early September, India was found to have the second highest number of cases globally behind the United States with more than 80,000 cases being identified every day.

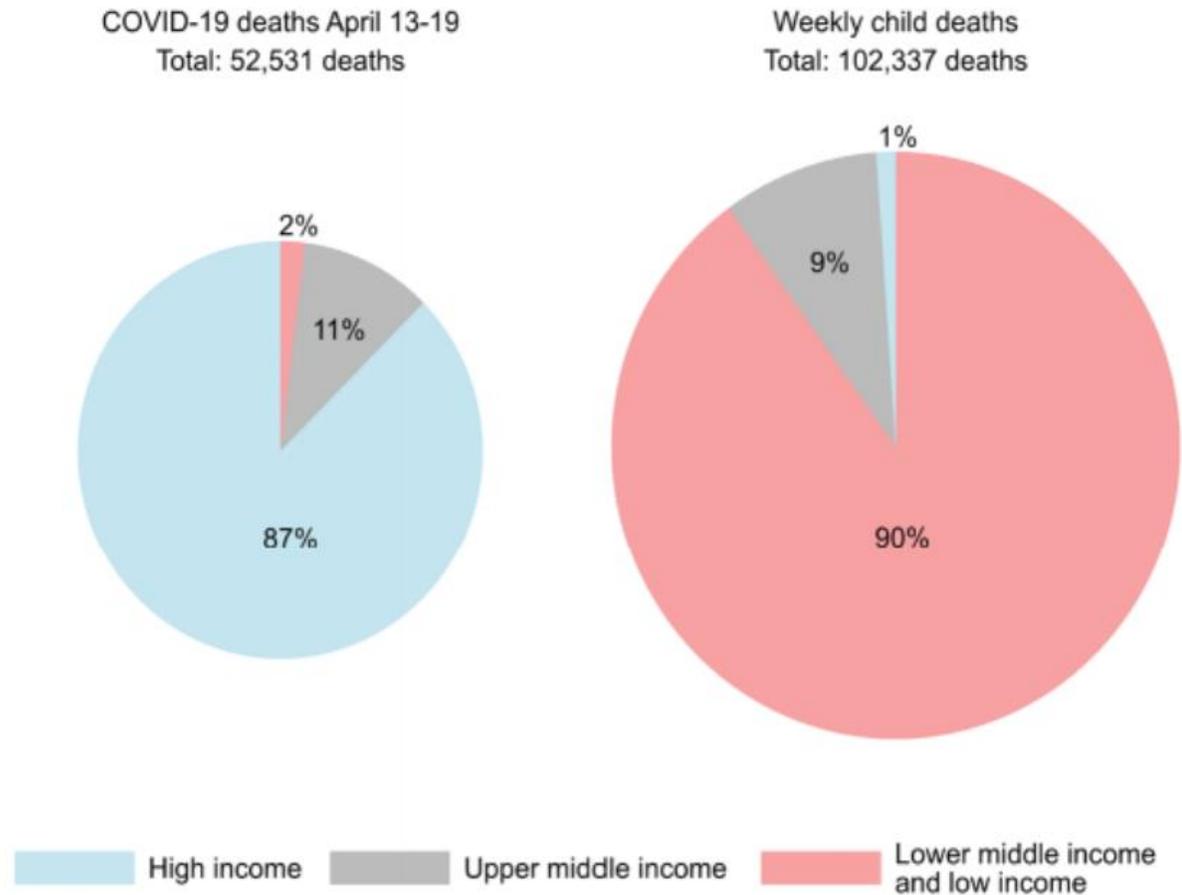

Figure 1. Distribution of global child deaths/per week (2018) and COVID-19 deaths for the deadliest week (April 13-19, 2020) across World Bank income classification. Data sources: [1-3].

Source: [Lessons from COVID-19 – Subramanian et al 2020](#)

The COVID-19 crisis has facilitated the availability of real-time data in public domain, which have been analyzed by numerous scientist and policy experts to help inform policy responses. The attention given by the Indian government and media has greatly raised public awareness on health, hygiene and nutrition. When comparing this experience to other important health/nutrition indicators the absence of similar real-time data is remarkable. In analysis of the global impact of COVID-19, the pandemic caused over 52,000 deaths in the most deadly week of COVID-19 identified in April 2020. The most recent data on child mortality under five years of age is from 2018 and there were almost twice the number of deaths among children under five compared to the current COVID 19 fatalities. In India, the lower mortality rate for COVID-19 than global averages indicate that the number of child deaths was more than double than deaths caused by the pandemic. New estimates on the effects of COVID and the subsequent response for India will be released in October and suggest that the negative impacts on health and nutrition have been underestimated. The data in the figure above indicates the importance of maintaining the focus on nutrition and health during emergencies including pandemics and to adopt the real-time data based approach for more effective response. [\(Subramanian et al., 2020\)](#).

POSHAN MAAH

The government's flagship national nutrition mission, the POSHAN Abhiyaan is facing the nutrition challenges of the country. September 2020 was declared National Nutrition Month. To support the Jan Andolan (people's movement) for nutrition, the Prime Minister announced digital Poshan Panchayat (engagement of village leaders in the nutrition mission) and other methods for mass sensitization through community radio, local channels and social media for nutrition. Behavior change efforts were repositioned from in-person to digital communication and the activities were recorded on the [Jan Andolan Dashboard](#). Early identification and treatment of children with severe acute malnutrition (SAM) and the promotion of kitchen gardens (to ensure access to nutrient dense foods) were prioritized at the grassroots level. States organized Poshan Maah launches, issued Poshan Maah guidelines, led online trainings, re-initiated CMAM programs since COVID, intensified screening and referral of children with SAM, activated digital and where possible interpersonal communication/counselling activities with appropriate COVID 19 prevention practices.

NUTRITION CHALLENGES DURING COVID-19

The Poshan Maah highlighted the importance of nutrition following the lockdown. The pandemic and subsequent response has disrupted delivery of public health/nutrition and social safety net services. To assess the impact of the pandemic on Indian population, the [National Human Rights Commission \(NHRC\) conducted an impact assessment](#) released on 28th September. The NHRC expressed concern that the Covid-19 pandemic aggravated hunger and malnutrition among vulnerable populations, especially children. Data on the coverage of mid-day meals and supplementary nutrition during lockdown were not available. It was recognized that in most states these services were provided as schools and Anganwadis remained closed. The reports also noted that the months before the Kharif harvest are known for greater 'hunger' and even in normal years there is an increase in the prevalence of childhood wasting

[The Community Based Monitoring conducted by UNICEF](#) and partners reported that by July of 2020:

- Half of female headed households reported food shortage and 43% of households with primary earning member unemployed reported food shortages
- 54% of urban pregnant women availed of ANC services and 22% received their PMMVY benefits, while
- Only 40% of rural pregnant women availed of ANC services and 9% received their PMMVY benefits

[FINDINGS FROM HMIS](#)

The National Health Mission's Health Management Information System (NHM-HMIS), provides monthly reports on delivery of health/nutrition services. These national data were taken offline for ongoing maintenance activity in the last week of April 2020. When the HMIS returned online in the last week of August 2020, the [Times of India](#) reported the following:

- Institutional deliveries fell by 28.2% from 45 lakhs in April-June 2019 to just 32.3 lakh in April-June 2020
- Newborns screened at birth fell by 87.6% from 20.9 lakh in April-June 2019 to just 2.6 lakh in April-June 2020
- Pregnant Women given free medicines under Janani Shishu Suraksha Karyakram (JSSK) fell by 63.7% from 31.9 lakh in April-June 2019 to just 11.6 lakh in April-June 2020

The data visualization of the NHM-HMIS data presented [here](#) in the Poshan COVID-19 Monitoring indicate that:

- The number of children (6-11 months) who received their first dose of vitamin A dropped from 1.5 million in March to 500,000 in April 2020
- The percentage of newborns initiating breastfeeding in the 1st hour after birth declined from 90% to 75% from April to June 2020
- The total admissions to community and facility based management of SAM dropped from almost 18,000 in March to less than 5,000 in April 2020
- The percentage of girls 6-12 class provided 4 weekly Iron Folic Acid tablets declined from 30% in March to 5% in April 2020

Who	What	Where	When
PRADAN	<p>More than 13,000 vulnerable households in around 1300 hamlets were supported with food grains, vegetables, covering 4 districts. PRADAN teams also engaged with community to do farm based livelihood interventions mainly on cereals, pulses and vegetables in trellis, livestock interventions on small ruminants on feed management, vaccination and habitat management to revive the rural economy. This interventions is going on with more than 60,000 households. The nutrition sensitive agriculture part is also integrated with the farm based livelihood planning and implementation. Small livestock based interventions mainly around Back Yard Poultry and Goat rearing was carried out. One of the major interventions was to create livelihood asset with individual Households and also ensuring cash income at door step through leveraging MGNREGA and working closely with PRIs and Community Institutions. In nutrition specific aspects , in intervention areas teams are closely associated with anganwadi and provide required support on it. PRADAN teams in partnership with CGSRLM imparted various online training and need based support to SHGs, VOs and CLFs to plan and implement various farm, livestock and forest based livelihoods.</p>	4 district Baster, Kanker, Dhamtari and Raigarh .	August, 2020
UNICEF	<p>1.Online orientation of NRC management to staff of 89 NRCs including MO/FD/SN on 13 August. 2.The first Breastfeeding week virtual meeting organsied on 5 August 2020 for Promotion of breastfeeding and complementary feeding in Chhattisgarh State connecting all health and ICDS officials and functionaries. 3. Online orientation on AMB coordinated with AIIMS New Delhi, and NI on 25th August for district/ block level officials. 4.The Breastfeeding week virtual meeting organsied on 5 August 2020 for Promotion of breastfeeding and complementary feeding in Chhattisgarh. State . Developed guidelines for opening AWCs in the state.</p>	Raipur and all Districts	August, 2020

UNICEF	Digital Messages through WhatsApp: counselling by Anganwadi Teacher to promote nutrition and health education in the communities has been one of the key components under Anganwadi services of ICDS umbrella scheme. But due to Covid-19, Government has imposed a lockdown on many of the routine services to prevent the spread of this virus. The regular counselling by AWT to deliver key nutritional messages also gets halted. So in the current scenario state has started digital nutrition counseling strategy to educate the AWC beneficiaries. Across the state Digital nutrition counseling related specific messages are sent to all the CDPOs and sector Supervisors & AWTs through existing Whats-app groups.	For all 33 districts of the in the state- Digital nutrition counselling related messages are sent to all the CDPOs and sector Supervisors through existing WhatsApp groups. -(Approximately 1600 CDPOs & Sector Supervisors)In POSHAN-Abhiyan 10 selected districts of the state, the nutrition counselling related messages will be sent directly to AWTs from the department through Whatsapp. The AWTs will be advised to share these messages with beneficiaries as per schedule.- (Approximately 10,000 AWTs are covered in ICDS- CAS implementing districts)	During August - September
