INTRODUCTION

The POSHAN COVID-19 Resources is an online repository of government circulars, national and international guidelines and technical documents on programming during the COVID-19 Pandemic. This is an easy-to-use compilation of COVID-19 resources focusing on nutrition, food security, early childhood development and related issues. The central and state-level policies since the start of the outbreak and lock-down are also provided in the efforts to restore essential services across the life cycle. The Resources site is updated regularly, providing comprehensive evidence-informed guidance in nutrition and is publicly available for policymakers, researchers, health professionals and general public.

NATIONAL RESOURCES

State Policy Analysis

Drawing from Government circulars and guidelines, work by IFPRI/POSHAN presented in the policy matrices below gives an overview of the rapid evolution of policy actions over the past three months since the recognition of the COVID-19 pandemic and the subsequent lock-down from 25th March to 31st May 2020. State level government circulars or decrees were collected into an online database. These decrees were analyzed by their contents to determine the status of the delivery of interventions across the life cycle and included in the POSHAN Abhiyaan interventions. The results extracted were coded as intervention is fully operational, Intervention partly functional for selected beneficiaries or areas, Intervention is not operational and No information.

The matrix shows that in terms of the policy environment, the take home rations (THR) and immunization services in most all state were decreed to continue during the lockdown period. Announcements through the government circulars for the halt of growth monitoring and promotion services were found in most states. Mixed results for maternity cash benefits (PMMVY) and Mother's Absolute Affection (MAA) guidance on counselling for infant and young child feeding were found in the available government circulars.

The data presented are not comprehensive. Efforts will be made to fill the data gaps existing in states and UTs and to update on a regular basis.

Key	Indication
Yes	Intervention fully operational for all beneficiaries through mobilization or outreach
Partly	Intervention provided at health facilities without mobilization or outreach; or partly functional for selected beneficiaries or areas
No	Intervention not operational
NI	No information
